

# Innovative Structural Construction Methods

US Army Corps  
of Engineers

Geotechnical and Structures Laboratory

***The following figures were extracted from:***

**INNOVATIVE ALTERNATIVES TO CONVENTIONAL  
LEVEES FOR FLOOD PROTECTION**

Report Submitted to:

U. S. Army Corps of Engineers  
Waterways Experiment Station  
3909 Halls Ferry Road  
Vicksburg, MS 39180-6199

and

The Office of The Chief of Engineers  
Directorate of Civil Works  
20 Massachusetts Avenue N.W.  
Washington, D.C. 20314-1000

Report Submitted by:

J. Michael Duncan, James K. Mitchell, Christian Lovern, James Coffey

Department of Civil Engineering  
Virginia Tech  
Blacksburg, Virginia 24061-0105

15 December 1997

# Asphalt Concrete-Faced Embankment Levees

<b>Flood Control Method:</b>	<b>ASPHALT CONCRETE-FACED EMBANKMENT LEVEE</b>
<b>Strong Points (cont'd):</b>	Mastic coating can be applied after placing asphalt concrete for additional decrease in permeability Most applicable when the embankment fill consists of high or uncertain permeability soils, armor material is expensive, limited construction time is available, or the importing of impermeable soil is not cost effective.
<b>Problems:</b>	Expensive initial cost Maintenance required Not aesthetically pleasing Limited historical use, mostly European
